Acknowledgments

I would like to acknowledge here the contributions of my research colleagues with whom I have worked on several of these research problems and co-authored publications which form the basis for this book — Dr. Jason Iness, for the work on optimizing amplifier placements (presented in Chapters 3 and 4); Prof. Debasish Datta, for the work on BER and switch modeling (presented in Chapter 6 and Appendix A); and Ms. Helena Feng and Prof. Jonathan P. Heritage, for the work on amplifier modeling (presented in Chapter 6 and Appendix B). I thank Prof. Jason P. Jue, Dr. Michael S. Borella, and Dr. Dhritiman Banerjee for their contributions to the material presented in Chapter 2.

I thank Prof. Biswanath Mukherjee, my research advisor and Ph.D. committee chair, for his guidance and encouragement throughout the course of my graduate study at the University of California, Davis which resulted in the research presented in this book. I feel inspired by his boundless enthusiasm, dedication to excellence, careful attention to detail, and infinite patience. I feel privileged to have had the opportunity to study under him. I also thank him for writing the Foreword to this book.

I thank Mr. Alex Greene and Ms. Patricia Lincoln at Kluwer Academic Publishers for their help and patience at every stage in the development of this book.

I thank the U.S. National Science Foundation and Agilent Technologies who support my research on optical networks.

Finally, I thank my parents and my family for their constant support and encouragement throughout my life.
