

DESIGN OF OPTICAL WDM NETWORKS LAN, MAN and WAN Architectures

BYRAV RAMAMURTHY
University of Nebraska–Lincoln

With a Foreword by

BISWANATH MUKHERJEE
University of California

Kluwer Academic Publishers
Boston/Dordrecht/London

Contents

List of Figures	xiii
List of Tables	xvii
Preface	xix
Acknowledgments	xxiii
Foreword	xxv
1. INTRODUCTION	1
1.1 Optical Networks and WDM	1
1.2 Focus of This Book	3
1.2.1 Optimizing Amplifier Placements	4
1.2.2 Wavelength Conversion	6
1.2.3 Impact of Transmission Impairments	7
1.3 Book Outline	8
2. OPTICAL NETWORK DEVICES	9
2.1 Introduction	9
2.2 Optical Fiber	11
2.2.1 Attenuation in Fiber	12
2.2.2 Limitations due to fiber nonlinearities	12
2.2.3 Couplers	13
2.3 Optical Amplifiers	15
2.3.1 Optical Amplifier Characteristics	16
2.3.2 Semiconductor-Laser Amplifier	16
2.3.3 Doped-Fiber Amplifier	17
2.4 Switching Elements	19
2.4.1 Fiber Crossconnect Elements	20
2.4.2 Non-Reconfigurable Wavelength Router	21
2.4.3 Reconfigurable Wavelength-Routing Switch	22
2.4.4 Optical Packet Switches	23
2.5 Physical Layer Issues and Limitations	24
2.5.1 Power Considerations	24
2.5.2 Crosstalk	25
2.5.3 Additional Considerations	26

2.5.4	Elements of Local Area WDM Network Design	26
2.5.5	WDM Wide Area Network Design Issues	29
2.6	Conclusion	31
Part I LAN/MAN Architectures		
3.	OPTIMIZING AMPLIFIER PLACEMENTS: THE EQUALLY-POWERED CASE	35
3.1	Introduction	35
3.1.1	Problem Definition	38
3.1.2	Amplifier Gain Model	38
3.2	Solution Approach	41
3.2.1	Notation	41
3.2.2	Module I: Test the Feasibility of the Network	43
3.2.3	Module II: Generate the Constraints	44
3.2.4	Module III: Solve Mixed-Integer Linear Program	47
3.2.5	Module IV: Place the Amplifiers	48
3.2.6	Lower-Bound Analysis	49
3.3	Numerical Examples	51
3.3.1	An Illustrative Example: Sample Network 1	51
3.3.2	Results and Discussion	54
3.4	Summary	55
4.	OPTIMIZING AMPLIFIER PLACEMENTS: THE UNEQUALLY-POWERED CASE	61
4.1	Introduction	61
4.2	Solution Approach	64
4.2.1	Formulation	64
4.2.2	Solver Strategies	69
4.2.3	Amplifier-Placement Module	72
4.3	Numerical Examples	73
4.4	Summary	80
Part II WAN Architectures		
5.	WAVELENGTH CONVERSION	85
5.1	Introduction	85
5.2	Enabling Technologies	89
5.2.1	Wavelength-Converter Design	89
5.2.2	Wavelength-Convertible Switch Design	94
5.3	Network Design, Control, and Management Issues	95
5.3.1	Network Design	95
5.3.2	Network Control	98
5.3.3	Network Management	100
5.4	Benefit Analysis	100
5.4.1	Analytical Models	101

<i>Contents</i>	xi
5.4.2 Related Work on Gain Characterization	109
5.5 Summary	111
6. IMPACT OF TRANSMISSION IMPAIRMENTS	113
6.1 Introduction	113
6.2 Network Simulation Model	116
6.2.1 Network Architecture	116
6.2.2 Event-Driven Simulation Module	119
6.2.3 On-Line BER Evaluation Module	120
6.2.4 BER Model	121
6.2.5 SIMON: A Simulator for Optical Networks	123
6.3 Illustrative Numerical Examples and Discussion	124
6.4 Summary	129
7. CONCLUSIONS	131
7.1 Summary	131
7.2 Future Research Directions	132
Appendices	134
Switch Model	135
EDFA Model	145
References	149
Index	163
