

## Homework 7

**Assigned on:** Friday, October 26<sup>th</sup>, 2018.

**Due:** Wednesday, November 7<sup>th</sup>, 2018.

**Points:** 100, plus a potential 20 bonus points in the main tract. Additionally, you have the option of implementing a SAT solver for 100 additional bonus points.

---

## Contents

1	AIMA, Exercise 7.1, page 279.	(16 points)	1
2	AIMA, Exercise 7.7, page 281.	(6 points)	1
3	Truth Tables	(8 points)	1
4	AIMA, Exercise 7.10, page 281.	(16 points)	1
5	Logical Equivalences	(8 points)	2
6	AIMA, Exercise 7.22, page 284.	(18 points + 20 bonus)	2
7	Proofs	(28 points)	2
8	Bonus: Implementation, Solving SAT	(100 points)	3

**Alert:** If you submit your homework handwritten, it must be *absolutely neat* or it *will not* be corrected. If you type your homework (preferable), submit using webhandin.

---

1	AIMA, Exercise 7.1, page 279.	(16 points)
2	AIMA, Exercise 7.7, page 281.	(6 points)
3	Truth Tables	(8 points)

Use truth tables to show that each of the following is a tautology.

1.  $(p \wedge q) \rightarrow \neg(\neg p \vee \neg q)$
2.  $[Mary \wedge (Mary \rightarrow Susy)] \rightarrow Susy$
3.  $\alpha \rightarrow [\beta \rightarrow (\alpha \wedge \beta)]$
4.  $(a \rightarrow b) \rightarrow [(b \rightarrow c) \rightarrow (a \rightarrow c)]$

4	AIMA, Exercise 7.10, page 281.	(16 points)
---	--------------------------------	-------------

Only b, c, d, e, f, and g.

## 5 Logical Equivalences

(8 points)

Using a method of your choice, verify:

1.  $(\alpha \rightarrow \beta) \equiv (\neg\beta \rightarrow \neg\alpha)$  contraposition
2.  $\neg(\alpha \wedge \beta) \equiv (\neg\alpha \vee \neg\beta)$  de Morgan
3.  $(\alpha \wedge (\beta \vee \gamma)) \equiv ((\alpha \wedge \beta) \vee (\alpha \wedge \gamma))$  distributivity of  $\wedge$  over  $\vee$

## 6 AIMA, Exercise 7.22, page 284.

(18 points + 20 bonus)

Parts a, b, and c are required. Parts d, e, and f are bonus.

## 7 Proofs

(28 points)

Give the explanations of each step if the steps are given, and give both the explanation and step if they are not.

- If  $q \wedge (r \wedge p), t \rightarrow v, v \rightarrow \neg p$ , then  $\neg t \wedge r$ .

**Proof**

**Explanations**

- |                            |       |
|----------------------------|-------|
| 1. $q \wedge (r \wedge p)$ | Given |
| 2. $t \rightarrow v$       | Given |
| 3. $v \rightarrow \neg p$  | Given |
| 4. $t \rightarrow \neg p$  |       |
| 5. $(r \wedge p)$          |       |
| 6. $r$                     |       |
| 7. $p$                     |       |
| 8. $\neg\neg p$            |       |
| 9. $\neg t$                |       |
| 10. $\neg t \wedge r$      |       |

- If  $p \rightarrow (q \wedge r), q \rightarrow s$ , and  $r \rightarrow t$ , then  $p \rightarrow (s \wedge t)$ .

**Proof**

**Explanations**

- |    |  |
|----|--|
| 1. |  |
| 2. |  |
| 3. |  |
| 4. |  |
| 5. |  |
| 6. |  |
| 7. |  |

- **Prove by contradiction.**

If  $\neg(\neg p \wedge q), p \rightarrow (\neg t \vee r), q$ , and  $t$ , then  $r$ .

**Proof**

**Explanations**

- |                                    |       |
|------------------------------------|-------|
| 1. $\neg(\neg p \wedge q)$         | Given |
| 2. $p \rightarrow (\neg t \vee r)$ | Given |

3. $q$	Given
4. $t$	Given
5. $\neg r$	Negation of Conclusion
6.	
7.	
8.	
9.	
10.	
11.	
12.	

## 8 Bonus: Implementation, Solving SAT (100 points)

Write a search algorithm to determine the satisfiability of a SAT instance. You can either write:

- A DPLL procedure (backtrack search),
- A local search procedure.

You must

- Clearly describe, in addition to your code, your data structures, how your search algorithm operates, and the improvements, if any, that you have included in your code.
- We recommend that you use the standard file for input files known as the ‘simplified version of the DIMACS format’:  
<http://www.satcompetition.org/2009/format-benchmarks2009.html>
- Test the performance of your algorithm on some non trivial uniform random instances taken from the SAT Competition. For example:  
<http://www.cs.ubc.ca/~hoos/SATLIB/benchm.html>

Alert: many implementations exist in the literature and on the web. We expect you to do your *own* implementation.
