

Homework 7

Assigned on: Friday, November 1st, 2019.

Due: Friday, November 15th, 2019.

Points: 100, plus a potential 20 bonus points in the main tract. Additionally, you have the option of implementing a SAT solver for 100 additional bonus points.

Contents

1	AIMA, Exercise 7.1, page 279.	(16 points)	1
2	AIMA, Exercise 7.7, page 281.	(6 points)	1
3	Truth Tables	(8 points)	1
4	AIMA, Exercise 7.10, page 281.	(16 points)	1
5	Logical Equivalences	(8 points)	2
6	AIMA, Exercise 7.22, page 284.	(18 points + 20 bonus)	2
7	Proofs	(28 points)	2
8	Bonus: Implementation, Solving SAT	(100 points)	3

Alert: If you submit your homework handwritten, it must be *absolutely neat* or it *will not* be corrected. If you type your homework (preferable), submit using webhandin.

1	AIMA, Exercise 7.1, page 279.	(16 points)	
2	AIMA, Exercise 7.7, page 281.	(6 points)	
3	Truth Tables	(8 points)	

Use truth tables to show that each of the following is a tautology.

1. $(p \wedge q) \rightarrow \neg(\neg p \vee \neg q)$
2. $[Mary \wedge (Mary \rightarrow Susy)] \rightarrow Susy$
3. $\alpha \rightarrow [\beta \rightarrow (\alpha \wedge \beta)]$
4. $(a \rightarrow b) \rightarrow [(b \rightarrow c) \rightarrow (a \rightarrow c)]$

4	AIMA, Exercise 7.10, page 281.	(16 points)	
---	--------------------------------	-------------	--

Only b, c, d, e, f, and g.

5 Logical Equivalences

(8 points)

Using a method of your choice, verify:

1. $(\alpha \rightarrow \beta) \equiv (\neg\beta \rightarrow \neg\alpha)$ contraposition
2. $\neg(\alpha \wedge \beta) \equiv (\neg\alpha \vee \neg\beta)$ de Morgan
3. $(\alpha \wedge (\beta \vee \gamma)) \equiv ((\alpha \wedge \beta) \vee (\alpha \wedge \gamma))$ distributivity of \wedge over \vee

6 AIMA, Exercise 7.22, page 284.

(18 points + 20 bonus)

Parts a, b, and c are required. Parts d, e, and f are bonus.

7 Proofs

(28 points)

Give the explanations of each step if the steps are given, and give both the explanation and step if they are not.

- If $q \wedge (r \wedge p), t \rightarrow v, v \rightarrow \neg p$, then $\neg t \wedge r$.

Proof

Explanations

1. $q \wedge (r \wedge p)$
2. $t \rightarrow v$
3. $v \rightarrow \neg p$
4. $t \rightarrow \neg p$
5. $(r \wedge p)$
6. r
7. p
8. $\neg\neg p$
9. $\neg t$
10. $\neg t \wedge r$

Given

Given

Given

- If $p \rightarrow (q \wedge r), q \rightarrow s$, and $r \rightarrow t$, then $p \rightarrow (s \wedge t)$.

Proof

Explanations

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.

- **Prove by contradiction.**

If $\neg(\neg p \wedge q), p \rightarrow (\neg t \vee r), q$, and t , then r .

Proof

Explanations

1. $\neg(\neg p \wedge q)$
2. $p \rightarrow (\neg t \vee r)$

Given

Given

- | | |
|-------------|------------------------|
| 3. q | Given |
| 4. t | Given |
| 5. $\neg r$ | Negation of Conclusion |
| 6. | |
| 7. | |
| 8. | |
| 9. | |
| 10. | |
| 11. | |
| 12. | |

8 Bonus: Implementation, Solving SAT (100 points)

Write a search algorithm to determine the satisfiability of a SAT instance. You can either write:

- A DPLL procedure (backtrack search),
- A local search procedure.

You must

- Clearly describe, in addition to your code, your data structures, how your search algorithm operates, and the improvements, if any, that you have included in your code.
- We recommend that you use the standard file for input files known as the ‘simplified version of the DIMACS format’:
<http://www.satcompetition.org/2009/format-benchmarks2009.html>
- Test the performance of your algorithm on some non trivial uniform random instances taken from the SAT Competition. For example:
<http://www.cs.ubc.ca/~hoos/SATLIB/benchm.html>

Alert: many implementations exist in the literature and on the web. We expect you to do your *own* implementation.
