Reasoning & logic

Assume we know the following facts:

Jones, Smith, and Clark hold the jobs of programmer, knowledge engineer, and manager (not necessarily in that order).

Jones owes the programmer $10.

The manager’s spouse prohibits him/her borrowing money.

Smith is not married.

Your task is to figure out which person has which job. (The words figure out means briefly explain how you arrived at your answer. No justification means no points.)

Hint: You may derive the result by logic. For example, if you use symbol $SP$ to indicate “Smith is the programmer”, symbol $SE$ to indicate “Smith is the knowledge engineer”, symbol $SM$ to indicate “Smith is the Manager”, then $\neg SP$ means “Smith is not the programmer”. Also $SP$ implies $\neg SE$ and $\neg SM$.
