Problem A- Prove or disprove each of the following using the definitions and without using the Lemma on page 15 of the slides:

(a) If $R$ is asymmetric, then $R$ is antisymmetric.

(b) If $R$ is antisymmetric, then $R$ is asymmetric.

Instructions Follow instructions carefully, failure to do so may result in points being deducted.

- The homework can be submitted on paper or via handin. Homework neatly formatted in \LaTeX will receive a 10 point bonus. You will not receive the 10 bonus points if you work with a partner (see below).

- Clearly label each problem and submit answers in order.

- Staple this cover page to the front of your assignment for easier grading.

- Late submissions will not be accepted

- When you are asked to prove something, you must give a formal, rigorous, and complete a proof as possible. Each step in your proof must contain explanation that would allow us to understand what theorem/logic you have applied to arrive at that step.
• You are to work individually, and all work should be your own. Check partner policy below.

• The CSE academic dishonesty policy is in effect (see http://cse.unl.edu/ugrad/resources/academic_integrity.php).

**Partner Policy** You may work in pairs, but you must follow these guidelines:

1. You must work *all* problems *together*. You may not simply partition the work between you.

2. You must use \LaTeX and you may divide the typing duties however you wish.

3. You may not discuss the problems with other groups or individuals.

4. Hand in only one hard copy with both author’s names.
