**Activity 1: Read the Generation GPS article.**

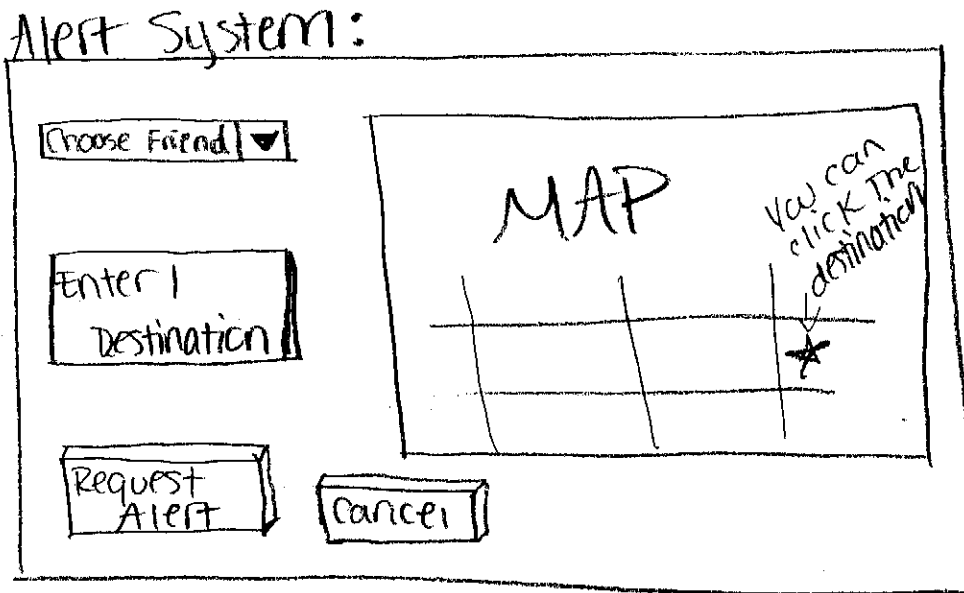

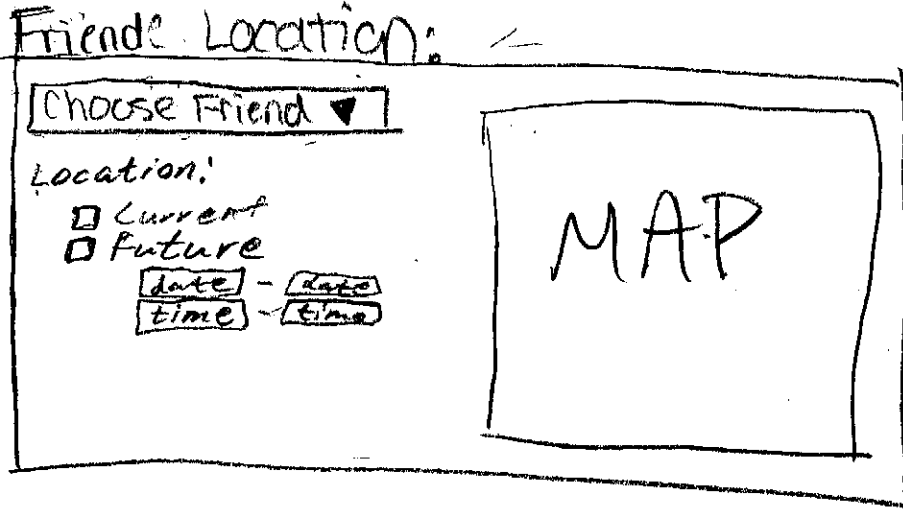

Activity 2: Come up with two new features that you would add to the Loopt system.

1) Sync with a calendar that lets you/other people know where you plan to be at certain times in the future (i.e. Geoffry will be in class in two hours)

2) An alert system that notifies you if someone in your network of friends comes near you or arrives at a specified location (i.e. it will notify you if your friend arrives at the restaurant you're meeting him/her at)

Team Name: \_\_\_\_\_

Activity 3: Describe a general GUI design for each of the two features.

If you click the destination on the map "enter destination" text box will automatically be filled w/ the address of the clicked destination.
