**Activity 1: Read the Generation GPS article.**

Activity 2: Come up with two new features that you would add to the LoopIt system.

Team Name: Quintillion & the Rhetoricians

- 1) Schedule detailing where you are going - where you will be at a certain time
- 2) Search or log of where you have been
- 3) a public domain that keeps track of how many people are in a certain location - you can search for a location and see how busy it is.

**Activity 3: Describe a general GUI design for each of the two features.**

if you select a dot it tells you when you were there and for how long and gives details about the location

3. Using a system Google Maps

Search location have it give information about the business & location and indicate how many people are there now.
