		Goals of a Talk
	Why Are We Here?	
		Meta-Goal:
How to Give a Good Research Talk*	<ul> <li>For your work to have significant impact, it is essential that you can convey results to your community</li> </ul>	<ul> <li>keep audience's interest (and attention)</li> </ul>
		<ul> <li>convey technical material</li> </ul>
Stephen D. Scott	<ul> <li>Your technical reputation depends on colleagues' reaction to your talk</li> </ul>	<ul> <li>communicate a key idea of work</li> </ul>
		<ul> <li>provide intuition</li> </ul>
	<ul> <li>When on the job market this skill will be crucial in getting a research position in academics or industry</li> </ul>	<ul> <li>convince audience to read your paper</li> </ul>
November 21, 2008	<ul> <li>Giving a good talk is a skill you can learn</li> </ul>	Non-Goals:
		<ul> <li>show people how smart you are</li> </ul>
	<ul> <li>I will give you guidance and tips on giving a good talk</li> </ul>	<ul> <li>expect audience to understand most key details of your work</li> </ul>
*Adapted from Sally Goldman's slides.

	The Introduction	Concept Class of One-Dimensional Patterns
Structuring Your Talk	Define the Problem <u>minimize use of terminology</u> use pictures/examples/props if possible	<ul> <li>The instance space X<sub>n</sub> consists of all configurations of n points on the real line</li> <li>A concept is set of all configs from X<sub>n</sub> within unit</li> </ul>
<ul> <li>Use a top-down approach:</li> <li>1. Introduction: define problem, present a "carrot", put in context, and give outline</li> <li>2. Body: high-level summary of key results</li> <li>3. Technicalities: more depth into a key result</li> <li>4. Conclusion: review key results, wrap up, give future work</li> </ul>	<ul> <li><u>use pictures/examples/props if possible</u></li> <li>Motivate the audience (give a "carrot") <ul> <li>why is problem important?</li> <li>how does it fit into larger picture?</li> <li>what are applications?</li> </ul> </li> <li>Discuss related work <ul> <li>table useful (mention authors and dates)</li> </ul> </li> <li>Succinctly state contributions of your work</li> <li>Provide a road-map (outline)</li> </ul>	<ul> <li>A concept is set of all configs. from X<sub>n</sub> within unit distance under Hausdorff metric of some "ideal" configuration of k points, where Hausdorff distance between configs. P and Q is</li> <li>H(P,Q) = max {max {min {dis {min {d(p,q)}}, max {min {d(p,q)}}, max {min {d(p,q)}}}, and d(p,q) is distance between p and q</li> <li>If P is any configuration of points on R, then concept corresponding to P is C<sub>P</sub> = {X ∈ X<sub>n</sub> : H(P,X) ≤ 1}</li> <li>X is a positive example of C<sub>P</sub> if X ∈ C<sub>P</sub> and is a negative example otherwise</li> <li>Concept class of one-dimensional patterns is C<sub>k,n</sub> = {C<sub>P</sub> : P is a configuration of ≤ k points from R}</li> </ul>
Concept Class of One-Dimensional Patterns		
• Each concept c is a set of fixed-width intervals on real	The Body	The Technicalities
line	Abstract the key results	
• Each example X is a set of points on real line	<ul> <li>focus on a central, exciting concept</li> </ul>	• Take key result (or part of it) and go into some depth
• Example <i>X</i> is positive if and only if:	Explain significance of your work	<ul> <li>Guide audience through difficult ideas</li> <li>– give overview</li> </ul>
1. each of $X$ 's points lies in an interval from $c$	<ul> <li>Sketch methodology of key ideas</li> </ul>	- state result
2. each interval of $c$ contains a point from $X$	<ul> <li>keep it high-level, emphasizing structure</li> </ul>	<ul> <li>show an example</li> </ul>
concept [ ] [ ]	<ul> <li>use pictures/diagrams if possible</li> </ul>	– review
$X_1$ $\longrightarrow$ positive	<ul> <li>provide intuition (helpful when someone later reads your paper)</li> </ul>	<ul> <li>It is this portion of your talk that typically grows when you give a 50 minute talk</li> </ul>
$X_2$ $\bullet$ $\bullet$ $\bullet$ negative	<ul> <li>gloss over technical details</li> </ul>	
$X_3 \longrightarrow \bullet \bullet \bullet \bullet$ [ ] • • • negative		

## The Conclusion

- Provide a coherent synopsis
- Review key contributions and why they are important
- Discuss open problems/future work
- Indicate your talk is over. (For example, "Thank you. Are there any questions?")
- Be ready to answer questions
  - If there are points you glossed over that you expect the audience may be interested in, you may want to prepare some slides (just in case)

- Slide Prep—Do's (cont'd)
- · Check your spelling
- If you use a slide more than once, duplicate it
- PRACTICE!
  - give a practice for your colleagues, advisor, friends, pets, etc.
  - be ready to redo all your slides
  - practice again
  - be sure that all your material projects on the screen
  - make sure it does not take too much time (Beware PowerPoint's timer!)

## Slide Preparation—Do's

- Decide what you want to say and say less!
- Allow an average of 1.5–2 minutes for each slides
- Use Repetition
  - "Tell them what you're going to tell them. Tell them.
     Then tell them what you told them."
  - Realize that 20% of your audience at any given time is thinking about something else
- Use pictures/diagrams whenever you can

Slide Prep—Do's (cont'd)

- Use a large font (at least 20 pt)
- Make neat/orderly slides (computer-generated preferable)
- · Use overlays or other "scaffolding"
- Use color/animation (in a meaningful way)
- You need not use full sentences
- Number your slides
- · Write reminders, key phrases, etc. on paper

- Slide Preparation—Don'ts
- Overload slides
- · Intend to use too many slides
- Put some detail on the slide that you do not want to talk about
- Get bogged down in details
- Try to give a core dump

- Slide Preparation—Don'ts (cont'd)
- Show complex equations
- Show complex code (even pseudocode)
- Have a slide that introduces a point that you are unsure of (unless you want to give the audience a chance to attack you)
- Present last-minute results (they are probably wrong)
- Have slides that you are not using mixed in with the rest
- Write messy, write (or use a font that is) too small, misspell words

At the Talk—Do's	At the Talk—Do's (cont'd)	At the Talk—Do's (cont'd)
	<ul> <li>Be EXCITED about your work!</li> </ul>	<ul> <li>Point to the screen, not slide/computer monitor</li> </ul>
<ul> <li>If you expect the audience to take notes, provide copies of your slides</li> </ul>	Remind; don't assume	<ul> <li>Use a pointer, not hand/pen</li> </ul>
<ul> <li>Rarely the case at a conference or colloquium/job talk</li> </ul>	<ul> <li>If you assume a standard result, provide the audi- ence with a brief <u>reminder</u></li> </ul>	Bring props
<ul> <li>Dress appropriately—this shows respect for your audience</li> </ul>	<u>Talk with Sufficient Volume</u>	<ul> <li>Ask real and rhetorical questions to keep audience engaged</li> </ul>
Have eccentricity (but not too extreme)	Make eye contact and "read" the audience	Deflect obstructionists:
<ul> <li>make it fun/easy for people to remember you</li> </ul>	<ul> <li>Change victims</li> </ul>	<ul> <li>tell them you'd like to talk to them after the talk (about the interesting point made) because the point</li> </ul>
<ul> <li>extreme eccentricity is bad for younger people</li> </ul>	Be with the audience	is a detail, tangential, has a long answer, you need to think about it, etc.
ροφισ	<ul> <li>Walk toward and away from the people as well as left and right to break down implicit barrier</li> </ul>	End on time!
19	20	21
At the Talk—Don'ts	Concluding Remarks	
• Talk too softly, mumble, or speak in a monotone voice, use "um", "ah",	Follow the guidelines provided here	
Read your slides		
<ul> <li>Focus attention on the screen—you'll end up talking</li> </ul>	<ul> <li>Take every opportunity you can to give talks (and thus get practice and feedback)</li> </ul>	
<ul><li>• Stand so that you block the projection</li></ul>	<ul> <li>Remember that the guidelines for structuring your talk must be adapted to each specific talk</li> </ul>	
Mention a detail/point you don't want to talk about	<ul> <li>Preparing a good talk takes time; do not expect to throw it together at the last minute</li> </ul>	
• Darken the room (unless necessary to see) since it entices audience to sleep	Practice for colleagues, etc. to get feedback	
Babble on when you have nothing to say	<ul> <li>AND: you will give better talks and reap the rewards that follow</li> </ul>	
Run over time
