

Vive Equipment Rules

1. Do not remove any piece of the vive equipment from the designated area.
2. Be extremely careful with the equipment, replacing it would not be easy and any amount of time that the equipment is out of order impacts other students' ability to use it and be productive. Be aware of your surroundings and be sure to use the "chaperone" mode to avoid hitting a wall and other equipment. Always place the wand straps around your wrists to avoid losing your grip. You should use the Vive with another person present to help you if you need it with cord management and to avoid injury.
3. For the health and safety of others, do not use the equipment if you have open sores; avoid using excessive makeup, perfumes, colognes and other items that may cause irritation to other users. When possible, clean the equipment before and after use and consider using a temporary sanitary strip.
4. Be good custodians of the equipment; plug the wands back in so they are charged for the next user, keep the areas clean and organized.
5. Be good custodians of the course Steam account(s), which are used for the convenience of everyone. Don't purchase unapproved software and do not logout or misuse the account(s).
6. The equipment is to be used only by students registered for this course. Make sure you are giving everyone a chance to use the equipment.
 - The equipment in Ross 213 is available during the course meeting times. However, the room is used throughout business hours and access will be limited M-R 9-5PM. Access after 5PM is available by using your Ncard.
 - The equipment in Schorr 114.1 will be available during regular business hours, M-F 8AM – 5PM. After hours Ncard access is not available at this time unless you are in the building before 5PM.
7. The software can be really finicky. It is everyone's responsibility to keep it in working order, so you may need to troubleshoot it from time to time and to make sure your fellow students know and follow best practices (if you fix it, document the problem and how you fixed it for others). Software and firmware updates are frequent, so please keep them up-to-date.
