Administrivia

- ▶ Overrides, if needed, will be granted on a priority basis; if you need an override, see me after class
- Syllabus
- ► Homework 0

Overview

- ► This course studies **design** and **analysis** of algorithms
 - ▶ **Design:** Methods used to create new algorithms to solve problems (e.g., greedy, dynamic programming, divide and conquer)
 - ► Analysis: Mathematical (as opposed to empirical) assessment of an algorithm's correctness and efficiency

Correctness and Efficiency

- Correctness: Does the algorithm do what it is supposed to do on all inputs?
 - Could be an infinite or exponential number of inputs, so cannot typically do this empirically
- ▶ **Efficiency:** Measuring the algorithm's **running time**
 - ► Count number of basic operations (e.g., number of comparisons in sorting)
